

HI SB 110

Modular spreader system

User Manual

HI SB 110

Modular spreader system

User Manual

Introduction

The HI SB 110 is a spreader system designed for carrying loads. The HI SB 110 may only be assembled and used by suitably skilled staff. This user manual tells you the correct way to assemble the HI SB 110 in the desired configuration and how you can use it safely. Always keep this user manual in a safe place near the HI SB 110.

Product Description

The HI SB 110 has a modular construction and it comprises a set of end units, associated shackles and various struts. The lengths of the struts vary from half a meter to six metres. See Figure 1, Figure 2 and Table 1 for more information about the various parts.

Figure 1 – Overview of the HI SB 110

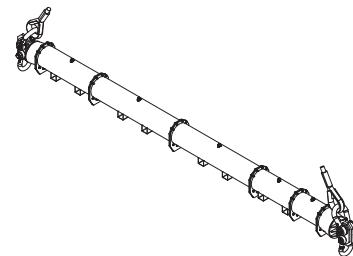

Figure 2 – Components of the HI SB 110

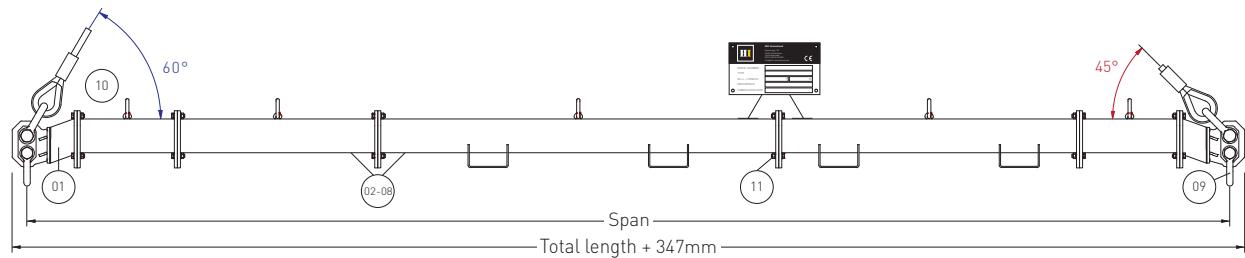

Table 1 - Components

#	Type	Description	Specifications	Weight (kg)	Qty
01	HI SB 110 00	HI End unit	0,75m	187	2
02	HI SB 110 05	HI Strut	0,50m	90	*
03	HI SB 110 10	HI Strut	1m	134	*
04	HI SB 110 20	HI Strut	2m	236	*
05	HI SB 110 30	HI Strut	3m	325	*
06	HI SB 110 40	HI Strut	4m	431	*
07	HI SB 110 50	HI Strut	5m	502	*
08	HI SB 110 60	HI Strut	6m	591	*
09	G-5263	Green Pin Super Shackle	WLL 85t	45,1	2
10	P-6036	Green Pin shackle	WLL 120t	114	2
11	Grade 8.8	Bolts, Nuts and Washers	M24x90	8 pcs per connection	

*Depending on the configuration.

Safety Instructions

- Use the hoisting eyes at the tops of the strut or end unit only for moving a single component.
- Never use the HI SB 110 if the information on the documents supplied with it does not match the data on the identification plate.
- Never exceed the working load limit. See Table 2 for additional information.
- Never use less than the mandatory minimum sling length. See Table 2 for more information.
- Never use the HI SB 110 if the angle of the lower slings is more than 6 degrees from perpendicular.
- Always use suitable and certified slings.
- Use ropes to guide the load while it is being moved.
- Never use the HI SB 110 for lifting people.
- Never use the HI SB 110 if the annual inspection has not taken place or if it has expired. Make sure that the HI SB 110 is inspected and declared to be safe at least annually by a certified inspector of hoisting equipment.
- Never make alterations to the HI SB 110. Modifications can have consequences for safety.
- Never suspend loads from the struts or the flanges of the HI SB 110.
- Observe the locally applicable legislation and regulations about the use of the crane from which the HI SB 110 is suspended.

Assembly

1. Lay out the struts with the longest strut in the middle in the desired configuration on a flat and clean surface.
2. Connect up each flange using 8 pcs. M24x90 8.8 bolts, nuts and washers.
3. Tighten the bolts in stages, using a diagonal pattern. See Figure 3 for additional information. Use the tightening torques
 - Step 1: 50 per cent, i.e. 125 Nm
 - Step 2: 80 per cent, i.e. 200 Nm
 - Step 3: 100 per cent, i.e. 250 Nm
4. Fit the Green Pin shackle (P-6036), WLL 120 tons, in the top hole in each end unit.
5. Use the sling to attach the HI SB 110 to the crane hook. When doing so, take account of the desired vertex angle, the sling length and the size of the load. See Figure 4 and Table 2 for more information.
6. Fit the Green Pin Super Shackle (G-5263), WLL 85 tons, in the bottom hole in each end unit.
7. Get the HI SB 110 checked before use by a suitably competent member of staff or an external specialist.

Table 2 - Working load of the HI SB 110

Lifting angle top sling-vertical 60°			Recommended configuration ²								Lifting angle top sling-vertical 90°		
Length	WLL	Sling ¹									Length	WLL	Sling ¹

30m	39t	30m	<	4	6	6	6	6	0,5	>	30m	20t	23,9m

⁽¹⁾ Top sling - minimum sling length measured from inside eye to inside eye.

⁽²⁾ Other configurations are possible. However, the configuration should consist as less struts as possible.

NB! The longest strut should always be in the middle of the spreader beam.
